Vireo Footwear – Sustainability Report 2025

FICTIONAL DEMO REPORT – company and all figures are invented for testing.

Climate performance

Our Scope 1 and 2 emissions fell to 41,200 tCO2e in 2025, down 46% from our 2019 baseline. We will reduce absolute Scope 3 emissions by 42% by 2030 compared with 2019, as validated by the Science Based Targets initiative. In 2025, 91% of the electricity in our tier 1 factories came from renewable sources. Our emissions data for 2025 was independently verified by a third-party assurance provider.

GHG emissions (GRI 305)	Unit	2019 (base year)	2025
Scope 1 emissions	tCO2e	31,500	18,400
Scope 2 emissions (market-based)	tCO2e	45,100	22,800
Scope 3 emissions	tCO2e	1,610,000	1,240,000
Emission intensity	tCO2e per EUR million revenue	21.7	12.4

Materials and water

Recycled materials accounted for 58% of the polyester used in our shoes in 2025. We reduced water use per pair by 18% compared with 2022. We aim to eliminate virgin plastic from our consumer packaging by 2027, with an interim target of 60% in 2026. We are committed to responsible water management in our supplier factories.

Outlook

Our roadmap foresees an investment of EUR 120 million in factory electrification until 2030. Rising carbon prices could increase costs for our suppliers in Asia.

Governance of climate data

Our decarbonisation roadmap sets out interim milestones for 2027 and 2030 and is reviewed annually by the board. We do not use carbon credits to meet our reduction targets. Our Scope 1, 2 and 3 data received limited assurance from an independent auditor under ISAE 3410. This report has been prepared in accordance with the GRI Standards; the GRI content index is on page 4.
